RG104 E-1 Box 194

(All letters in reply to official communications must refer to initial in upper right-hand corner.)

(Inclosure)

Treasury Department,
Office of the Supervising Architect,
Washington, D. C.,
June 27, 1896.

Custodian,

U. S. Mint Building,

Philadelphia, Pa.

Sir:

Inclosed you will find a drawing illustrating the apparatus for ventilating the adjusting-room of the building in your charge. As the design for the ventilating apparatus is different from what was originally intended, you are requested to make a close examination of the locality where all this different work is to be placed, and report at once to this office if the work can be installed as shown, and if not, make such alterations and recommendations in connection therewith, on the drawing, which will enable this office to make the necessary alterations.

The fresh air is to be taken in through the windows of the ladies' dining and dressing-room into fresh-air chamber, and by means of a fan forced into ducts below the ceiling of the adjusting-room. To heat this air in winter, a coil has been placed, as indicated.

RG104 E-1 Box 194

The original intention was to place the entire apparatus, which is now located in the ladies' dining and dressing room, in the store-room adjoining such room, but the construction of the latter is such as to make this impossible.

Please give this your attention at once.

Respectfully yours,

W. Miller

Supervising Architect.
